D cket N .: JCLA9540

In The Claims:

Claims 1 - 6 (cancelled)

Claim ¹ (Current Amended) A display having a plurality of pixels therein for preventing electrostatic discharge, wherein each pixel has a light-emitting device, one major characteristic of the display includes:

b b a high resistant resistor connecting the anodes of the light-emitting devices in every pair of neighboring pixels, wherein the resistances of the high resistant resistors ^{is} ~~are~~ greater than the internal resistances of the light-emitting devices.

Claim 8. (Original) The display of claim ⁷, wherein the display is an active matrix organic electroluminescence display.

Claim ⁹ (Original) The display of claim ⁷, wherein the light-emitting device is an organic light-emitting diode.

Claim ¹⁰ (Original) The display of claim ⁷, wherein the light-emitting device is a polymeric light-emitting diode.
